PREFACE

The rapidly growing interest now being taken in English pronunciation has rendered imperative the production of an English *phonetic* dictionary, i. e. one in which the words appear *as actually pronounced* and are arranged according to their sounds, the current spelling being added after each word[1]).

A dictionary of this kind has many uses. In the first place the work constitutes an affirmation of an important principle, viz. the existence of the *spoken language* as distinct from the conventional written language. We are of opinion that in language study the *spoken language* is all-important — far more important than the written language. The conventional written form of English, and indeed of most other languages, is but a feeble and in many respects misleading representation of the true language, which is the spoken language.

In the past the *written language* has been looked up to by many as being the only form of the language worthy of respect. One result of this reverence for spelling has been that innumerable 'spelling-pronunciations' are creeping into the language. Teachers in elementary schools have to teach children to do *dictation*. Owing to our present barbarous system of spelling the children cannot help making innumerable mistakes; the teacher is accordingly constrained, often quite unconsciously, to pronounce the words in such a way as to indicate the spelling. These spelling-pronunciations are naturally adopted by the children, and in course of time become definitely incorporated into the language. Thus Margate trippers now generally speak of **'mɑːgeit** instead of **'mɑːgit**;

---

[1]) This dictionary is parallel to the *Dictionnaire phonétique de la langue française* by H. Michaelis and P. Passy (First edition 1897, second edition 1913).

teachers in London elementary schools now often say **ek'sept** for **ik'sept** 'except', **ekstrə'ɔːdinəri** for **iks'trɔːdnri** 'extraordinary', **'ɔftən** for **'ɔːfn**[1]) 'often', **'brɔmptən** for **'brʌmptən** 'Brompton', **'fɔːhed** for **'fɔrid** 'forehead', and pronounce the adjective **'seprit** 'separate' like the verb **'sepəreit.** The continuation of this process will soon bring us to **'kwainain** for **kwi'niːn** 'quinine' (as often in America), **'griːnwitʃ** for **'grinidʒ** 'Greenwich', **læmb** for **læm** 'lamb', **'mʌtən** for **'mʌtn** 'mutton'.

It is a regrettable fact that most pronouncing dictionaries definitely encourage many of the modern spelling-pronunciations[2]). We feel that such artificialities cannot but impair the beauty of the language, and we hope that the present dictionary may do something towards convincing the educated public of the desirability of studying the spoken language in preference to the conventional written language, and so avoiding undesirable changes in pronunciation in the future.

It is hoped that this work may also prove useful to students of *linguistic science* in general. Hitherto such students have been greatly hampered by the current orthography of many languages. Now, however, many important questions relating to English linguistic science can be studied with far greater ease. Such are the comparative frequency of sounds, rules of pronunciation depending on the positions of sounds relatively to other sounds, various processes of derivation[3]), distinctions of sense corresponding to distinctions of pronunciation not shown in the ordinary spelling[4]).

---

[1]) In spite of the fact that the form **'ɔftən** is described as vulgar in the Concise Oxford Dictionary.

[2]) We are glad to note, however, that the new Concise Oxford Dictionary is an exception.

[3]) E. g. the process which brought about the distinctions between **iks'plein** 'explain' and **eksplə'neiʃən** 'explanation', **ig'zibit** 'exhibit' and **eksi'biʃən** 'exhibition, etc.

[4]) E. g. the distinction between the adjectives **ə'proupriit** 'appropriate', **'seprit** 'separate', etc., and the verbs **ə'prouprieit, 'sepəreit,** etc., and between the nouns **'kɔmplimənt** 'compliment', **iks'perimənt** 'experiment', etc., and the verbs **'kɔmpliment, iks'periment,** etc.

This dictionary is intended further for use in connexion with the *practical study of English.* Here it may be useful in various ways.

1. A person hearing a word for the first time, and being in doubt as to how it should be spelt, may ascertain the current spelling by looking it out in the phonetic dictionary.

2. A person meeting with an unfamiliar word in a phonetic text may ascertain its current spelling by reference to the phonetic dictionary.

3. The dictionary may even be *read* with much profit. A foreigner, for instance, may learn much by simply reading down the lists of words beginning with, say, j· or rai·.

The *pronunciation* represented is that generally used by persons of culture in the South of England. This form of pronunciation is chosen not because it is intrinsically superior to any other, but because it is that generally found most useful by those studying the English language. Except where specially noted, only those variants are included which are undoubtedly frequent in the pronunciation of educated Southerners.

The phonetic alphabet used in this book is that of the *International Phonetic Association,* which is now the most widely used of any phonetic system[1]). A list of symbols employed with their values is given on p. XI. See also the 'Brief Description of English Pronunciation', p. XVI. Further information with regard to the formation of the sounds will be found in the books on phonetic theory mentioned on p. 443.

The fixing of a satisfactory *alphabetical order of the sounds* was a matter of no small difficulty, particularly in the case of the vowels. As it was not possible to arrange the whole of the vowels in a logically correct order depending

---

[1]) This system is used in several hundred books. A list of the 200 most important is given in a booklet entitled *The Principles of the International Phonetic Association* (obtainable from D. Jones, University College, London, W. C., price 6 d).

on their formation, we have arranged them in 5 groups, viz. vowels which may be roughly classed as belonging to the types **a, e, i, o, u.** The difference of sound quality between **i:** (as in '*ee*l') and **i** (as in '*i*ll') necessitated putting words containing these sounds in separate classes; so also with **u:** (as in '*oo*se') and **u** (as in 'p*u*t'). Further, the fact that so many speakers make a difference in sound between simple **e** (as in '*e*ll') and the first element of the diphthong **ei** (as in '*a*le') rendered it desirable to treat the words containing **ei** as a separate class, and place **ei** before simple **e** in the alphabetical order. Similarly it has been found desirable to place **ou** (as in '*o*ld') before simple **o** (as in 'm*o*lest') in the alphabetical order. To the **e** group we have assigned **ɛ** (as in '*ai*r'), **ə:** (as in '*ear*l') and **ə** (as in '*a*llow'), and to the **o** group **ɔ:** (as in '*a*ll') and **ɔ** (as in '*o*live'). In the **a** group are included **ɑ:** (as in '*al*ms'), **a** (first element of the diphthongs **ai** in '*ai*sle' and **au** in '*ow*l'), **æ** (as in '*a*ct') and **ʌ** (as in '*u*lster'). The most difficult point was the position of **ʌ**, the various authorities being by no means agreed as to its formation. After much consideration we decided to assign it to the **a** group on account of its acoustic similarity to the sound **a**. The consonants **ŋ** (as in 'ri*ng*'), **ð** (as in '*th*en'), **θ** (as in '*th*in'), **ʃ** (as in '*sh*e'), **ʒ** (as in 'mea*s*ure') come naturally after **n, d, t, s, z** respectively. As regards the semi-vowel **w** (as in '*w*ill'), it has seemed to us preferable to put it immediately after **u**, the sequence **u:, u, w** thus corresponding exactly with the sequence **i:, i, j.**

The complete order of the sounds is consequently:

ɑ:, a, æ, ʌ			**b, d, ð,**
ei[1]), **e, ɛ, ə:, ə**			**f, g, h,**
i:, i	**j**		**k, l, m, n, ŋ,**
ou[2]), **o, ɔ:, ɔ**			**p, r, s, ʃ, t, θ,**
u:, u	**w**		**v, z, ʒ.**

English words containing the French nasalized vowels **ɑ̃, ɛ̃, ɔ̃** (e. g. **sɑ̃ti:m** 'centime', **tɛ̃mbr** 'timbre', **ɔ̃mplɔiei** 'employé') are placed among the words with **ɑ:, ɛ, ɔ** respectively.

---

[1]) = Northern **e:**.
[2]) = Northern **o:**.

In order to avoid unnecessary complication in the transcription we have not indicated the special qualities of the short vowels as distinguished from the corresponding long ones (see p. XXI)[1]). Nor has it been considered necessary to distinguish by special signs the two varieties of **l**[2]) (see p. XVIII) or the varieties of **r** (see p. XIX), or to mark secondary stress (e. g. **ˌekspləˈneiʃən** 'explanation').

As regards the general plan of the work we would call special attention to the inclusion of all the plurals of nouns, inflected parts of verbs, and comparatives and superlatives of adjectives. These inflected forms are not given in full in most other dictionaries, but their inclusion will be found to bring out several points of interest to the language student. The student will learn, for instance, that there are many adjectives which admit of a superlative but not a comparative (e. g. **əbˈsəːd** 'absurd'). Again, the distinctions between the inflected forms in

fil, -z, -iŋ, -d
fiʃ, -iz, -iŋ, -t
fit, -s, -iŋ, -id

etc. are rarely realized or properly practised by foreigners, in spite of the rules which can be laid down for their guidance. We think that the continued repetition of these forms in this dictionary will impress them indelibly on the mind of any foreigner who will use the book systematically for a few days.

In conclusion we desire to express our thanks to all those who have assisted us in the preparation of this dictionary. In particular we acknowledge with gratitude much help from Prof. Walter Rippmann. At the outset he furnished us with many excellent suggestions regarding the plan of the work; he was also kind enough to revise the greater part of the manuscript, making innumerable corrections and suggestions

---

[1]) Some writers indicate these differences by using special symbols (**ɪ, ʊ,** etc.) or diacritical marks (e. g. **ì, ù,** etc.) for the short vowels.

[2]) Some writers use **l** for 'clear' **l** and **ɫ** for 'dark' **l**.

for improvements. Our thanks are also due to Prof. R. Weeks of Columbia University, New York, for information regarding the pronunciation of various American names, and to numerous other friends to whom we referred for the pronunciation of individual words. Further we owe a special debt of gratitude to Mr. G. Noël-Armfield, Assistant Lecturer on Phonetics at University College, London, for an immense amount of help in the preparation of the manuscript. He revised the whole of it with the utmost care, and supplied us with valuable notes on the pronunciation of thousands of words. Lastly we have to acknowledge our indebtedness to Messrs. Laupp of Tübingen for permission to reproduce the illustration of the Organs of Speech (frontispiece), and to our publisher for the care with which he has executed the work.

Biebrich and London, February 1913.

CONTENTS

Explanations and Abbreviations

In this dictionary the words are given first in phonetic transcription (thick type) and then in their conventional spelling (ordinary type). Thus

'bɑːli barley

means, "The word which is pronounced **'bɑːli** is written in conventional spelling 'barley'".

Grammatical indications (*s.*, *adj.*, *v.*, etc.) are added where a word may be more than one part of speech [e. g. **miːn** (*s.*), **miːn** (*adj.*) and **miːn** (*v.*)]; meanings are added, when necessary, to distinguish words which are spelt alike (e. g. to distinguish 'prayer' meaning 'one who prays' from 'prayer' meaning 'supplication').

Most variants[1]) which are frequent in the pronunciation of educated Southerners are included.

Optional sounds are given in italics. Thus the transcription

sivil*a*i'zeiʃ*ə*n

means that the word 'civilisation' may be pronounced in any one of the 4 ways **sivilai'zeiʃən**, **sivilai'zeiʃn**, **sivili'zeiʃən**, **sivili'zeiʃn.** The transcription **'æbsəl*j*uːt** indicates that some persons pronounce the word **'æbsəljuːt** and others **'æbsəluːt.**

The use of ˑ instead of ː is taken to mean that the short vowel is used by some speakers instead of the long vowel. Thus the transcription **sɔˑft** means that some say **sɔːft,** while others say **sɔft.**

Each of the other variants is placed in square brackets [ ] immediately after the more usual form of which it is the variant. The variants are also given in their proper alphabetical position, when this is remote from that of the more usual form, with a cross-reference. Thus

'peitrən [**'pæt-**] patron

means that some speakers pronounce the word **'pætrən,** but that **'peitrən** is more usual. The same thing is indicated by the reference **'pætrən** = **'peitrən.**

---

[1]) Excluding, however, variants occasioned simply by proximity to other words, e. g. **gu** for **gud** (as in **ə gu diːl**), **blain** for **blaind** (as in **blain mæn**), **ʃuː** for **juː** (as frequently in *don't you* **dount juː** or **dount ʃuː**).

The mark * appended to a word ending with a vowel indicates that most speakers insert the sound **r** at the end of the word when the following word begins with a vowel and is closely connected with the first word by the sense. Thus **pɛə*** indicates that the word by itself is pronounced **pɛə**, but that it is pronounced **pɛər** in such an expression as **ə 'pɛər əv 'bu:ts.** It should be noted however that very many speakers extend this practice to all words ending in the vowel **-ə** (including such words as **ai'diə, 'tʃainə**). Some also extend it to words ending in **-ɑ:** and **-ɔ:** which are not marked with * here (e. g. **pə'pɑ:, sɔ:** 'saw'). Others on the other hand go to the other extreme and never insert this **r** at all; such speakers generally insert a 'glottal stop' (phonetic symbol ʼ) at the beginning of the second word (e. g. **'wesminstə'ʼæbi** instead of **'wesminstər 'æbi**).

The plurals of nouns, comparatives and superlatives of adjectives, inflected forms of verbs, frequently also the terminations **-li, -nis, -mənt** and other derived forms, are placed immediately after the head word. Thus

hit, -s, -iŋ; -ə*, -əz hit, -s, -ting; -ter, -ters

shows that **hits** is spelt 'hits', **'hitiŋ** is spelt 'hitting', etc.

When necessary the sign | is used to mark off the part of a word repeated before each termination. Thus

im'pɔ:tən|s, -t, -tli importan|ce, -t, -tly

shows that **im'pɔ:təns** is spelt 'importance', **im'pɔ:tənt** is spelt 'important', **im'pɔ:təntli** is spelt 'importantly'.

The sign | is also sometimes used in the case of words not grammatically connected, for the purpose of saving space, e. g.

'rɔtʃ|deil, -istə* Roch|dale, -ester.

The sign / is sometimes used to indicate derivatives of derivatives. Thus we see from

smail, -z, -iŋ/li, -d smil|e (*s. v.*), -es, -ing/ly, -ed

that **'smailiŋ** is spelt 'smiling', and **'smailiŋli** is spelt 'smilingly'.

Irregular derived forms (such as **roud** from **raid** *v.*) are of course given in their proper alphabetical positions as well as after the head word. So also are any regular derived forms whose alphabetical positions are remote from that of the head word and which might not be instantly recognizable by the foreign student (e. g. **gouz, lɔkt**).

When a head word consists of one syllable and a derived word consists of two or more syllables, it is understood throughout that the stress of the derived word is on the first syllable. Thus the word formed from **nɔiz** by addition of the termination **-ili** is pronounced **'nɔizili** with stress on the first syllable.

It is further understood throughout that all words marked with double stress are liable to have their stress modified by rhythm. Thus though **'fif'ti:n** pronounced by itself has normally double stress, yet in **'fifti:n 'ʃiliŋz** it only has stress on the first syllable, while in **'dʒʌst fif'ti:n** it only has stress on the second syllable.

It is customary to pronounce many newly-borrowed foreign words (particularly French words) with the foreign sounds or an approximation to them. In such cases the foreign pronunciation[1]) is given in round brackets ( ). It should be noted that the plurals of such foreign nouns are formed in the English way even when the foreign pronunciation is adopted. Thus the plural of **bɔ̃bɔ̃** is **bɔ̃bɔ̃z.**

---

[1]) The following symbols are required for indicating special French sounds: **ɑ̃** (g*en*darme), **ɛ̃** (b*ain*), **ɲ** (bai*gn*oire), **ɔ̃** (b*on*b*on*), **ø** (j*eu*), **œ** (p*eu*r), **œ̃** (br*un*), **y** (br*u*nette), **ɥ** (p*u*is).

x indicates the breathed velar fricative, as in Scotch 'lo*ch*' and German 'Dra*ch*enfels'. The breathed palatal fricative **ç** (as in German 'i*ch*') is sometimes heard in English words as a substitute for the group **hj-** (see p. 69 and 187).

Other Signs and Abbreviations

● indicates the beginning of a new group of words.
○ „ „ „ „ „ „ sub-group.

ˈ means that the following syllable is stressed.
ˌ „ „ „ „ „ may be stressed or not.

ː means that the preceding sound is long.
ˑ „ „ „ „ „ is long or short.

ˌ placed under a consonant symbol, as in **n̩**, **l̩**, means that the consonant is syllabic.

Brief description of English Pronunciation

I. The Organs of Speech.

Language consists of sequences of sounds produced by the organs of speech.

The essential features of the organs of speech are shown in the following diagram.

B.	Back of Tongue.
Bl.	Blade of Tongue.
F.	Front of Tongue.
FP.	Food passage.
H.	Hard Palate.
LL.	Lips.
P.	Pharyngal cavity (Pharyux).
S.	Soft Palate.
TR.	Teeth-ridge.
TT.	Teeth.
U.	Uvula.
V.	Position of Vocal Chords.
W.	Wind-pipe.

Special attention is called to the meaning of the word **front** as applied to the tongue. It is the part which lies opposite the hard palate when the tongue is in the position of rest.

The **vocal chords** are like two horizontal lips situated in the larynx (the upper part of the wind-pipe). The space between them is known as the **glottis**.

When the chords are drawn close together and air is forced between them by the action of the lungs, they are caused to vibrate, and they produce a musical sound known as **voice**. When they

are held wide apart and air passes between them, they do not vibrate, and the very weak sound produced by the passage of the air is called **breath**.

Sounds in which voice is present are called **voiced sounds**; those in which breath is present are called **breathed** (or **voiceless**) sounds.

II. Classification of Speech Sounds.

There are two main classes of speech sounds, vowels and consonants.

A **vowel** is defined as a voiced sound in which the air has a free passage through the mouth and does not produce audible friction.

All other speech sounds are called **consonants**.

III. The English Sounds.

There are in Standard Southern English 37 elementary sounds. They are represented in this dictionary by the following phonetic symbols: **ɑ:, a, æ, ʌ, b, d, ð, e, ɛ, ə:, ə, f, g, h, i:, i, j, k, l, m, n, ŋ, o, ɔ:, ɔ, p, r, s, ʃ, t, θ, u:, u, w, v, z, ʒ.**

The mode of formation of these sounds is indicated in the following table.

		Labial: Bi-labial	Labial: Labio-dental	Dental	Palatal	Velar	Glottal
Consonants	Plosive	p b		t d		k g	
	Nasal	m		n		ŋ	
	Lateral			l		(l)	
	Rolled			r			
	Fricative	w	f v	θ ð, s z, ʃ ʒ	j	(w)	h
Vowels					Front / Mixed	Back	
	Close	(u:)			i:	u:	
		(u)			i	u	
	Half-close	(o)			e	o	
	Half-open				ɛ ə:		
		(ɔ:)			æ ə ʌ	ɔ:	
	Open	(ɔ)			a ɑ:	ɔ	

Sounds appearing twice on the chart have a double articulation, the secondary articnlation being shown by the symbol in brackets ( ).

For key words showing the values of the sounds see p. XI.

A. Consonants.

The following English consonants are voiced: **b, d, g, m, n, ŋ, l, r, w, v, ð, z, ʒ, j.** The following are breathed: **p, t, k, f, θ, s, ʃ, h.**

1. Plosive Consonants.

The air passage is completely closed and then opened, so that the air escapes suddenly, making a kind of explosive sound.

(a). The bi-labial plosives **p, b**, are formed by the two lips.
(b). The dental plosives **t, d**, are formed by the tip of the tongue against the teeth-ridge.
(c). The velar plosives **k, g**, are formed by the back of the tongue against the soft palate (velum).

2. Nasal Consonants.

The mouth passage is completely closed but the soft palate is lowered so that the nasal passage is open.

(a). The bi-labial nasal **m** is formed by the two lips.
(b). The dental nasal **n** is formed by the tip of the tongue against the teeth-ridge.
(c). The velar nasal **ŋ** is formed by the back of the tongue against the soft palate.

3. Lateral Consonants.

The mouth passage is closed in the middle, but the air is free to pass out on both sides of the obstacle.[1]

There is only one sound of this class in English, namely the dental lateral **l**. There are, however, with most speakers two very distinct varieties of this sound, viz. a 'clear' **l** used when a vowel follows (as in **li:f, sel it**), and a 'dark' **l** used finally[2] and before consonants (as in **bel, ketl, fi:ld**).

---

[1]) With some speakers the mouth passage is closed in the middle and on one side, the air being free to pass out on the other side.

[2]) By 'final' is meant final in a word pronounced by itself or final in a breath-group.

(a). In the 'clear' variety of **l** the tip of the tongue touches the teeth-ridge and the front of the tongue is simultaneously raised slightly in the direction of the hard palate.
(b). In the 'dark' variety of **l** the tip of the tongue touches the teeth-ridge exactly as for clear **l**[1]) and the back of the tongue is simultaneously raised in the direction of the soft palate.

4. Rolled Consonants.

Formed by a rapid succession of taps of some elastic organ.

The only consonant of this class occurring in English is rolled **r**, a sound formed by the tip of the tongue vibrating against the teeth-ridge.

Note. Many speakers (perhaps most), however, use only a fricative **r**, in which the tip of the tongue is placed close to the teeth-ridge in much the same position as for rolled **r**, but does not vibrate. Even those who possess rolled **r** do not use is exclusively or even consistently. They generally substitute fricative **r** after dental consonants (as in **triː**, **drɔː**, **ˈhenri**, **ʃriŋk**) and very often in other cases. Some speakers use a 'semi-rolled' **r** (i. e. a rolled **r** consisting of but one single tap of the tongue) between vowels, and fricative **r** in other cases.

5. Fricative Consonants.

The air passage is narrowed so that friction is heard as the air escapes.

Fricative consonants are sometimes subdivided into two groups (1) **pure fricatives,** in which the friction is strong, and (2) **semi-vowels,** in which the friction is weak.

Of the English fricative consonants, **f, v, θ, ð, s, z, ʃ, ʒ** and **h** are pure fricatives, while **w** and **j** are semi-vowels. Fricative **r** is best treated as a pure fricative but with many speakers it loses much of its friction becoming semi-vocalic.

The amount of friction in **w** and **j** is sometimes so slight that the sounds may be treated as vowels used in the capacity of consonants; they are then practically equivalent to the vowels **u** and **i** pronounced extremely short.

(a). The labio-dental fricatives **f, v** are formed by the lower lip against the upper teeth.
(b). The dental fricatives **θ, ð** are formed by the tip of the tongue against the upper teeth, the main part of the tongue being more or less flat.

---

[1]) Foreigners must take care not to curl back the tip of the tongue in pronouncing this sound. For the purposes of practice it is well to keep the tip of the tongue *touching the teeth.*

(c). The dental fricatives **s**, **z** are formed by raising the blade of the tongue (with many speakers also the tip) very close to the teeth-ridge and simultaneously raising the front of the tongue slightly in the direction of the hard palate. The teeth are very close together, much closer than for **θ**, **ð**.

(d). The dental fricatives **ʃ**, **ʒ** are formed by raising the blade of the tongue (with many speakers also the tip) towards the teeth-ridge a shade further back than for **s**, **z**, and simultaneously raising the front of the tongue considerably in the direction of the hard palate. The teeth are close together as in the case of **s**, **z**. Many speakers protrude the lips in pronouncing **ʃ** and **ʒ**.

(e). The fricative **r** is formed by raising the tip of the tongue towards the teeth-ridge still further back than for **ʃ**, **ʒ**. The teeth are not nearly so close together as in the case of **ʃ**, **ʒ**, and the friction is not strong.

(f). The glottal fricative **h** is the sound heard when the breath passes through the open glottis, the mouth being open and the tongue in some vowel position.

(g). The bi-labial fricative (semi-vowel) **w** is formed by rounding and pushing forward the lips, leaving but a very small opening, and simultaneously raising the back of the tongue in the direction of the soft palate. The friction is very slight.

(h). The palatal fricative (semi-vowel) **j** is formed by raising the front of the tongue so as almost to touch the hard palate. The friction is very slight. The corresponding breathed sound (phonetic symbol ç) is sometimes heard as a substitute for the group **hj**.

(i). In the velar fricative **x** (heard in Scotch words such as *loch*) the back of the tongue is raised towards the soft palate.

B. Vowels.

Vowels are classified

(1) according to the part of the tongue which is raised,
(2) according to the height to which it is raised.

Thus we distinguish the classes **front**, **back** and **mixed** according as the front, back or an intermediate part of the tongue is raised; and we distinguish 4 degrees of height, which we call **close**, **half-close**, **half-open** and **open**.

Some vowels may be distinguished as **tense** or **lax**, according as the tongue is in a state of considerable muscular tension or is held loosely.

Some vowels have **lip-rounding**, others have the lips spread or neutral. The following English vowels are rounded: **u:**, **u**, **o**, **ɔ:**, **ɔ**. Of these **u:** has the greatest amount of lip-rounding, **u** and **ɔ:** have a little less, **o** still less, and **ɔ** very little.

The table on p. XVII shows the approximate tongue positions of the English vowels. We add here some further explanatory notes.

(a). Long **i:**, **u:** are tense; short **i**, **u** are lax. e is lax.

(b). **o** is lax and advanced towards the mixed position. With many speakers it is definitely mixed, or sometimes almost front (resembling French and German **ø**). The vowel **o** occurs chiefly in the diphthong **ou**; by itself it only occurs in unstressed syllables (e. g. **mo'lest**).

(c). **ɛ** only occurs in the diphthong **ɛə**; **a** only in the diphthongs **ai**, **au**.

(d). Short **ɔ** has the tongue as low down and as far back as possible, and there is not much lip-rounding. It has a much deeper quality than the corresponding French and German sound.

(e). Long **ɔ:** has considerable lip-rounding; the tongue position is a shade higher than that of short **ɔ**.

(f). In **ʌ** the lips are spread. The sound has considerable acoustic resemblance to **a**.

(g). In long **ə:** the lips are spread as for **i:** and the teeth are close together.

(h). The quality of short **ə** varies somewhat according to its position. The tongue is lower when the sound is final[1]) (as in **'tʃainə**, **biə**) than in other cases (such as **ə'baut**, **prə'tekt**). Short **ə** never occurs in a stressed syllable unless it forms part of a diphthong.

Nasalized Vowels.

Vowels pronounced with simultaneous lowering of the soft palate (into the position shown in the diagram, p. XVI) so that the air passes through the nose as well as the mouth are said to be nasalized. The nasalized vowels **ɛ̃**, **ɑ̃**, **ɔ̃** occur in many words recently borrowed from French.

C. Diphthongs.

When two consecutive vowels only form one syllable, they are said to constitute a **diphthong**.

The following diphthongs occur in English: **ei**, **ou**, **ai**, **au**, **ɔi**, **iə**, **ɛə**, **ɔ:ə**, **uə**; also as variant forms: **ui**, **eə**, **oə**.

In the alphabetic arrangement of the sounds the diphthongs **ei**, **ou** are placed before the single sounds **e**, **o** (see p. VIII).

---

[1]) See note 2, p. XVIII.

IV. Length.

The principal rules of length in English are as follows.

(1). The vowels **iː, əː, ɑː, ɔː, uː** are longer than the other vowels (with the exception of **æ**, see note below) under similar circumstances, i. e. when surrounded by the same sounds and pronounced with the same degree of stress.

The vowels **iː, əː, ɑː, ɔː, uː** are therefore often called the 'long vowels' and the others the 'short vowels'. For this reason too it is sufficient in practical phonetic writing to distinguish these sounds from the corresponding short vowels by using simply a length-mark (ː), in spite of the fact that there are also certain differences in quality.

(2). The long vowels and diphthongs are shorter when followed by breathed consonants than when final[1]) or followed by voiced consonants.

Thus in **fiːt** the vowel is shorter than in **fiːd** or **fiː**; in **rais** the diphthong is shorter than in **raiz** or **rai.**

(3). The long vowels and diphthongs are shorter when immediately followed by another vowel than they are when final[1]).

Thus the **iː, ɔː** in **ˈsiːiŋ, ˈdrɔːiŋ** are shorter than the vowels in **siː, drɔː**.

(4). The long vowels and diphthongs are shorter in unstressed syllables than in stressed syllables.

Thus the **ɔː** in **ɔːˈθɔriti** is shorter than that in **ˈɔːθə.**

(5). The vowel **ə** when not final is extremely short.

Note. The vowel **æ**, though generally called a short vowel, is fully lengthened by many speakers in numerous words ending in voiced consonants. This lengthening is however carried out very inconsistently, some speakers lengthening the vowel in some words, and others in other words. The only indication that can be given is that there is a strong tendency to lengthen **æ** in the adjectives ending in **-æd.** Thus in **bæd, sæd** the vowel is more often long, while in the substantives **læd, kæd** it is more often short. The lengthening is not however confined to words ending in **-d**; it is by no means uncommon to hear **kæb, bæg, dʒæm, mæn** and many other words pronounced with a fully long vowel. Usage is, however, not sufficiently definite to admit of indicating in the dictionary these variations in the length of the vowel **æ.**

---

[1]) See note 2, p. XVIII.

V. Stress.

The force of the breath with which a syllable is pronounced is called **stress.**

Stress is marked in this dictionary by ' placed immediately before the stressed syllable[1]).

It is possible to formulate certain rules of stress in English, but their number is so large and most of them are subject to so many exceptions, that the simplest course for the student of the English language is to learn the stress of each word individually.

Those who prefer to study the rules are referred to the chapter on stress in the *Outline of English Phonetics* by D. Jones (Teubner, Leipzig).

For double-stressed words see p. 26, 174, 372.

VI. Intonation.

Intonation is defined as the variations in the pitch of the musical note produced by the vocal chords in the pronunciation of voiced sounds.

In English, intonation does not form an integral part of the pronunciation of any word, but only affects the general meaning of the sentence. Intonation is therefore not marked in the dictionary.

For information with regard to English intonation see D. Jones *Outline of English Phonetics* (Teubner, Leipzig), also *Intonation Curves* (same author and publisher).

---

[1]) The ideal place for the stress-mark would be over the symbol of the stressed vowel. This arrangement has, however, the practical disadvantage of necessitating the cutting of a large number of new types.

'ʌltrə- ultra-

Numerous compound adjectives may be formed by prefixing ʌltrə- *to adjectives. It is unnecessary to give these words here. These compounds have double stress, e. g.* 'ʌltrə'fæʃənəbl [-ʃn̩ə-] ultrafashionable.

When such adjectives are used as substantives they keep the double stress. The two words
ʌltrəmə'riːn ultramarine
ʌltrə'məntein ultramontane
are no longer felt to be compounds.

'ʌlvəstən Ulverstone

● ʌn- un-

Large numbers of compounds may be formed by prefixing ʌn- *to other words. The spelling of any which are not given in the following pages may be ascertained by referring to the simple word.*

The rarer words are all pronounced with double stress, less commonly with single stress. The transcription ˌʌn- *indicates that the prefix may be stressed or not.*

List of Books, etc., Recommended for the Study of English Pronunciation.

In the books marked with an asterisk * the pronunciation is represented by means of the alphabet of the *International Phonetic Association*.

1.—Books on Phonetic Theory.

*D. Jones, *The Pronunciation of English* (Cambridge University Press, 2s. 6d.). Contains some phonetic texts.

* „ *Outline of English Phonetics* (Teubner, Leipzig). In preparation. Designed specially for foreign students.

*W. Rippmann, *The Sounds of Spoken English* (Dent, London, 1s.).

* „ *English Sounds* (Dent, London, 1s.). Designed specially for children.

H. Sweet, *The Sounds of English* (Oxford University Press, 2s. 6d.).

„ *Primer of Spoken English* (Oxford University Press, 3s. 6d.). Contains some phonetic texts.

*L. H. Althaus, *The Sounds of the Mother Tongue* (London University Press, 2s.). Designed specially for children.

*B. Dumville, *The Science of Speech* (University Tutorial Press, London, 2s. 6d.).

*W. Vietor, *Elemente der Phonetik* (Reisland, Leipzig, 8s.).

*A. Western, *Englische Lautlehre* (Reisland, Leipzig, 3s.).

*R. J. Lloyd, *Northern English* (Teubner, Leipzig, 3s. 3d.). Contains some phonetic texts.

*W. Grant, *The Pronunciation of English in Scotland* (Cambridge University Press). Contains some phonetic texts.

2.—Phonetic Readers.

*D. Jones, *Phonetic Readings in English* (Winter, Heidelberg, 1s. 10d.).

* „ *Phonetic Transcriptions of English Prose* (Oxford University Press, 2s.).

* „ *Intonation Curves* (Teubner, Leipzig, 2s. 8d.).

*W. Rippmann, *Specimens of English* (Dent, London, 1s.).

*G. E. Fuhrken, *Phonetic Transcription of Jespersen-Rodhe Engelsk Läsebok* (Fritze, Stockholm, 2s. 9d.).

*E. R. Edwards, *Phonetic Transcription of Vietor-Dörr Englisches Lesebuch* (Teubner, Leipzig, 2s. 3d.).

*H. Smith, *Phonetic Transcription of Shindler's Echo of Spoken English* (Elwert, Marburg, 1s. 6d.).

*G. Noel-Armfield, *100 Poems for Children* (Teubner, Leipzig, 2s.).

**Le Maître Phonétique*, the Journal of the International Phonetic Association, edited by P. Passy, and D. Jones (2s. 10d. per annum).

3.—Pronouncing Dictionaries.

*H. Michaelis and D. Jones, *Phonetic Dictionary of the English Language* (Meyer, Hannover).

*D. Jones, *English Pronouncing Dictionary* (Dent, London). In preparation.

J. A. Afzelius, *Concise English Pronouncing Dictionary* (Norstedt, Stockholm, 6s. 6d.). Uses a system of phonetic notation not very different from the International.

*Ziegler and Seiz, *Englisches Schulwörterbuch* (Marburg, 4s. 6d.).

*R. M. Pierce, *Dictionary of Hard Words* (Dodd, Mead & Co., New York). Uses International phonetic notation with a few modifications.

J. Brynildsen, *English and Danish Dictionary* (Gyldendal, Copenhagen). Uses a phonetic system differing but slightly from the International.

J. Murray, *Oxford English Dictionary* (Clarendon Press).

Fowler, *Concise Oxford Dictionary* (Clarendon Press, 3s. 6d.).

4.—Phonetic Charts.

*D. Jones, *English Speech Sounds* (Cambridge University Press, paper, 1s. 6d., mounted with rollers, 3s. 6d.).

* „ *A small Chart of English Speech Sounds*, with key words and notes (Oxford University Press, 4d.).

*W. Vietor, *Englische Lauttafel* (Elwert, Marburg, paper, 2s., mounted with rollers, 4s.).

*W. Rippmann, *The Sounds of English* (Dent, London, paper, 1s., mounted with rollers, 2s. 6d.).

D. Jones, *The Organs of Speech* (Cambridge University Press, paper, 1s. 6d., mounted with rollers, 3s. 6d.).

A. Zund-Burguet, *The Organs of Speech* (Elwert, Marburg, 5s.)

*F. Rausch and D. Jones, *Sound Charts* (Dent, London). A set of 9 charts showing the positions of the organs of speech in pronouncing some of the more important vowels. 12s. 6d. the set.

5.—Models of the Organs of Speech.

C. Rammé (Plastische Anstalt, Hamburg). Larynx, M. 10.80.

„ („ „ „). Mouth, nose, etc., with removable tongue and larynx, M. 30.—.

6.—Books on the History of English Pronunciation.

*O. Jespersen, *Modern English Grammar*, Vol. 1 (Winter, Heidelberg, 9s.).
*W. Viëtor, *Shakespeare's Pronunciation*, 2 Vols. (Elwert, Marburg). Vol. I., Phonology, 6s. Vol. II., Reader, 3s. 8d.).
A. J. Ellis, *Early English Pronunciation*, Vols. I—IV. (Early English Text Society).
H. Sweet, *History of English Sounds* (Oxford University Press, 14s.).
H. C. Wyld, *Historical Study of the Mother Tongue* (Murray, London, 7s. 6d.).
*D. Jones, *Scenes from Shakespeare in the Original Pronunciation* (International Phonetic Association, 10d.).

Other works by H. Michaelis.

**Dictionnaire phonétique de la langue française.* Par H. Michaelis et P. Passy. (Hannover, Meyer-Prior.)
**Französische Unterrichtsbriefe.* Von H. Michaelis und P. Passy. (Berlin, Mentor-Verlag, 27.— M.)
**Abriß der deutschen Lautkunde.* (Berlin, Mentor-Verlag, 1.— M.)
**A. Müllers Aussprachewörterbuch der Eigennamen.* 7. Auflage, ergänzt u. bis zur Gegenwart fortgeführt von H. Michaelis (1903). (Berlin, Mentor-Verlag, 5.50 M.)

Other works by Daniel Jones.

**The Sounds of French Language.* By Paul Passy. Translated by D. L. Savory and D. Jones. (Oxford University Press, 2s. 6d.)
**100 Poésies Enfantines* recueillies et mises en transcription phonétique. Par D. Jones. Illustrations par E. M. Pugh. (Leipzig, Teubner, 2.20 M.)
**The Pronunciation and Orthography of the Chindau Language* (London University Press, 1s.).
**A Cantonese Phonetic Reader.* By D. Jones and Kwing Tong Woo. (London University Press.)

Short Particulars
of the
International Phonetic Association.

PRESIDENT—W. VIETOR, Marburg a. L., Germany.
SECRETARY—P. PASSY, Bourg-la-Reine, Seine, France.
ASSISTANT SECRETARY—D. JONES, University College, London, W. C.

The International Phonetic Association is a Society consisting of persons interested in the science of **Phonetics,** chiefly professors, teachers and students of languages.

Its main object is to promote the *scientific study* of Phonetics and the various *practical applications* of that science.

The Association has devised a **Phonetic Alphabet** which may be used for the purpose of transcribing any language phonetically. This alphabet is very widely used, and there are several hundred published books in which it is employed.

The Association has instituted an official **examination** in Phonetics and grants a **diploma** to persons attaining a certain standard. Examinations are held from time to time by examiners appointed by the Council.

The Association now numbers over 1,500 members. It is governed by an **International Council** of 30, elected by the members every other year.

Full particulars of the Association and its objects, and explanations of the international phonetic alphabet (with transcriptions of various languages and a list of the principal books in which the international alphabet is used) will be found in the **"Principles of the International Phonetic Association",** published by the Society and given away to members on application to one of the Secretaries.

Persons may join the Association either as "ordinary" members or as "active" members.

Ordinary members receive free of charge the **"Maître Phonétique"**, the official organ of the Association (Editor: P. PASSY; Assistant-Editor: D. JONES). The *Maître Phonétique* is issued on the 30th of January, March, May, July, September and November of each year. It contains articles in various languages, the International Alphabet being used throughout. The articles deal with all branches of Phonetics and its applications, and give information respecting the progress made by the science in different parts of the world. The best methods of language-teaching are also discussed, and special texts suitable for students are given.

Every ordinary member is entitled to a *vote* at the election of the Council.

Every ordinary member has a right to 10 lines per annum of advertisement in the journal free of charge.

Active members are those who are willing to work actively in the interests of Phonetics and of the Association. They receive *two copies* of the *Maître Phonétique*, the additional copy being intended for propaganda purposes; they are *eligible to serve on the Council*, and are entitled to *two votes* at the elections.

Every active member has a right to 25 lines per annum of advertisement in the journal free of charge.

The **Annual Subscriptions** are:—

For Ordinary Members, 3 francs 50 c. (= 2.80 M. = 2 s. 10 d. = 70 cents = 2 kr. 50 [Scandinavian] = Rs. 2 as. 2).

For Active Members, 6 francs (= 4.80 M. = 4 s. 10 d. = 1 dollar 20 c. = 4 kr. 30 [Scandinavian] = Rs. 3 as. 10).

Donations for furthering the work of the Association are also gratefully received.

Subscriptions are due on the 1 st of January each year. They may be paid to D. JONES, Esq. (address above); or direct to the Treasurer, Miss S. LUND, 27, Grande Rue, Bourg-la-Reine, Seine, France.

Druck von Hesse & Becker in Leipzig.
